August 2011

Student Name _____

Advisor _____

Mission Statement

The mission of the Chemical Engineering Department is to educate students who are highly sought after by employers internationally, excel in graduate and professional schools, engage in life-long learning, make significant contributions to the profession and society. The department will promote and support integrated teaching/learning, scholarship, and the Marianist tradition of community, leadership, and service.

Chemical Engineering Program Objectives

1. Chemical Engineering graduates have successful careers in the chemical process industry with the skills necessary to have opportunities to work in non-traditional industries and positions.
    - Measure 1: Extent that engineering degree assisted in career.
    - Measure 2: Extent that engineering degree provided necessary skills to succeed
    - Measure 3: Overall satisfaction with engineering education.
    - Measure 4: Oral and written communication skills.

2. Chemical Engineering graduates are successful at prestigious graduate, medical, and law schools.
    - Measure 1: Alumni attending graduate school survey.

3. Chemical Engineering graduates are committed to performing ethically while serving their professions, companies, and communities.
    - Measure 1: Serving the professions, companies, and communities survey.
    - Measure 2: Committed to performing ethically (advisory committee input, employer surveys, alumni surveys.)

4. Chemical Engineering graduates exhibit strong critical thinking skills from the breadth of their general education and the depth of their foundation in engineering principles, and engage in continuous intellectual and personal growth.
    - Measure 1: Importance and preparation of engineering topic.
    - Measure 2: Importance and preparation of educational abilities.
    - Measure 3: Continuous intellectual and personal growth.

Chemical Engineering Program Outcomes

a. An ability to apply knowledge of mathematics, science, and engineering
b. An ability to design and conduct experiments, analyze and interpret data.
c. An ability to design a system, component, or process to meet needs within realistic constraints, such as environmental, social political, ethical, health and safety, manufacturability, and sustainability.
d. An ability to function on multidisciplinary teams.
e. An ability to identify, formulate, and solve engineering problems.
f. An understanding of professional and ethical responsibility.
g. An ability to communicate effectively.
h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
i. A recognition for the need for, and an ability to engage in life-long learning.
j. A knowledge of contemporary issues.
k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Introduction

This handbook has been prepared to inform and assist Chemical Engineering students about their program of study and about the Chemical Engineering Department at the University of Dayton. Most of the information presented is available in other sources, but it has been collected here for your convenience.

With the other activities and information you are being inundated with the first few weeks of college, it will be hard to digest all of the information contained in this handbook at once. So when you have settled into your routine of classes it is very important that you take some time to examine the information contained herein, especially the following:

Bachelor in Chemical Engineering

Chemical engineering applies the principles of the physical sciences, economics, and human relations to research, design, build, and supervise facilities that convert raw materials into useful products and services.

The majority of chemical engineers are involved in the chemical process industries that produce many of the materials and items needed in everyday life. These include medicine, food, fertilizers, plastics, synthetic fibers, petroleum, petrochemicals, ceramics, and pulp and paper products. A chemical engineer may pursue a professional career in many other fields, such as energy conversion, pollution control, medical research, and materials development in aerospace and electronic industries. Chemical engineers are employed in research, development, design, production, sales, consulting, and management positions. They are also found in government and education. Many use a chemical engineering education as a stepping stone to law, medicine, or corporate management.

The curriculum in chemical engineering serves as basic training for positions in these diverse areas of the manufacturing industry or for graduate study leading to advanced degrees. The first part of the chemical engineering curriculum provides a firm foundation in mathematics, physics, and chemistry. The chemistry background is stressed. The second part of the curriculum offers a balance between classroom and laboratory experience in stressing chemical engineering topics such as transport phenomena, thermodynamics, kinetics and reactor design, separation processes, fluid flow and heat transfer operations, process control, and process design. The development of design tools, communication, and interpersonal skills is integrated throughout the curriculum. The curriculum allows concentrations in emerging technologies such as bioengineering, environmental engineering and materials engineering. Those interested in attending medical /dental school can pursue a pre-med preparation as part of their curriculum.

The Chemical Engineering Department at the University of Dayton is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology. The full-time faculty focuses on core courses in the Chemical Engineering program, while part-time faculty members from industry bring current industrial practice to the classroom.

Departmental Directory

Departmental Offices: 445 Kettering Labs

Telephone: (937) 229-2627
(On campus – dial 92627)

Web Site Address:

http://www.udayton.edu/engineering/chemical_and_materials/index.php

Department Chairman:
Dr. Charles Browning
407 Kettering Labs
Charles.Browning@notes.udayton.edu

Chemical Engineering Director:
Dr. Robert Wilkens
445 Kettering Labs
wilkens@udayton.edu

Administrative Assistant:
Janet Pastor
445 Kettering Labs
Janet.Pastor@notes.udayton.edu

Lab Manager: Mike Green - Science Center Room 177A

Undergraduate Student Advisor: Advising for first year students is coordinated through the Dean's Office Kettering Lab 261. The advisors for first year students are Ms. Beth Hart. Your advisor will change with each subsequent year, but will always remain a CME faculty member.

Graduate Studies Coordinator: Dr. Kevin J. Myers

Faculty

Mr. Thane Brown – KL 241A
Dr. Charles E. Browning – KL 407
Dr. Amy Ciric – KL 241D
Dr. Kristen Comfort – KL 241A
Dr. Don Comfort – KL 365
Dr. Matthew J. Dewitt – KL 150
Dr. Michael Elsass – KL 407
Dr. Daniel Eylon – KL 407
Dr. Joseph Fellner – KL 241A
Dr. Lawrance Flach – KL 445
Mr. Jim Griffin – KL 241A
Prof. Beth Hart – KL 445
Dr. Ryan Justice – KL 241A
Dr. Donald A. Klosterman – KL 563
Dr. C. William Lee – KL 445
Dr. Kevin Myers – KL 445
Dr. Jennifer Reid – KL 241A
Dr. Tim Resch
Mrs. Jamie Riley – KL 445
Dr. Sarwan S. Sandhu – KL 407

Chemical Engineering Curriculum
Guide to Course Prerequisites
Revised, August 2011

To use this guide, find the "KEY COURSE" of interest in the center column. Then, the left column gives prerequisites for that course, and the right column lists subsequent courses, which require the key course as a prerequisite.

Prerequisite	Key Course	Prerequisite for:
High School Chemistry	**CHM 123**	CHM 124, CME 203
CHM 123	**CHM 124**	CHM 313
MTH 116 or equivalent	**MTH 168**	MTH 169, CME 203, EGR 201, EGR 202, EGR 203
MTH 168 or 138	**MTH 169**	MTH 218
MTH 168 or 148	**PHY 206**	PHY 207, EGR 201
CHM 123, MTH 168, EGR 202 (co-req)	**CME 203**	CME 281,CME 311, CME 324, CME 430
CME 203	**CME 281**	CME 324, CME 381
CHM 124	**CHM 313**	CHM 314
CHM 313	**CHM 314**	
MTH 168, PHY 206	**EGR 201**	
MTH 168	**EGR 202**	
MTH 168	**EGR 203**	
MTH 169	**MTH 218**	MTH 219, CME 311
MTH 218	**MTH 219**	CME 324, CME 381
PHY 206, MTH 169 (co-req)	**PHY 207**	
CME 311	**CME 306**	CME 431
CME 203, MTH 218	**CME 311**	CME 365, 306, 465

Academic Calendar 2011-2012

https://registrar.udayton.edu/academiccalendar.asp

First Term

Tues, Aug 23	New Student Convocation
Tues, Aug 23	Last day to complete registration
Wed, Aug 24	Classes begin at 8:00 a.m.
Tues, Aug 30	Last day for late registration, change of grading options and schedules
Mon, Sep 5	Labor Day--no classes
Tues, Sep 13	Last day to change Second Session and full Summer Term grades
Wed, Sep 14	Last day to drop classes without record
Wed, Oct 5	Mid-Term Break begins after last class
Mon, Oct 10	Classes resume at 8:00 a.m.
Wed, Oct 19	First-Year students' midterm progress grades due by 4:00 p.m.
Fri-Sun, Nov 4-6	Family Weekend
Mon, Nov 7	Last day to drop classes with record of W
Tues, Nov 22	Thanksgiving recess begins after last class
Sat, Nov 26	Saturday classes meet
Mon, Nov 28	Classes resume at 8:00 a.m.
Thu, Dec 8	Feast of the Immaculate Conception/Christmas on Campus--no classes
Fri, Dec 9	Last day of classes
Sat, Dec 10	Study Day
Sun, Dec 11	Study Day
Mon-Fri, Dec 12-16	Exams--Fall Term ends after final examinations
Tue, Dec 20	Grades due by 9:00 a.m.
	Deficiency slips due in Deans' offices
Thu, Dec 22	Grades posted
Mon, Jan 23	Last day to change Fall Term grades
Sun, Dec 18	Christmas Break begins
Mon, Jan 16	Christmas Break ends

Second Term

Fri, Jan 13	Last day to complete registration
Tue, Jan 17	Classes begin at 8:00 a.m.
Mon, Jan 23	Last day for late registration, change of grading options and schedules
Mon, Jan 23	Last day to change Fall Term grades
Mon, Feb 6	Last day to drop classes without record
Wed, Feb 29	Mid-Term Break begins after last class
Mon, Mar 5	Classes resume at 8:00 a.m.
Wed, Mar 14	First-Year students' midterm progress grades due by 4:00 p.m.
Mon, Apr 2	Last day to drop classes with record of W
Wed, Apr 4	Easter Recess begins after last class
Mon, Apr 9	Easter Monday--no day classes--**classes resume at 4:30 p.m.**
Wed, Apr 18	Bro. Joseph W. Stander Symposium-Alternate Day of Learning
Fri, Apr 27	Last day of classes
Sat, Apr 28	Study Day
Sun, Apr 29	Study Day
Mon-Fri, Apr 30-May 4	Exams--Spring Term ends after final examinations

Tue, May 8	Grades due by 9:00 a.m. Deficiency slips due in Deans' offices
Thu, May 10	Grades posted
Mon, Jun 11	Last day to change Spring Term grades

,

Third Term – First Session

,

Fri, May 11	Last day to complete registration
Sat, May 12	Saturday classes begin
Mon, May 14	Classes begin at 8:00 a.m.
Tue, May 15	Last day for late Summer Term-First Session registration, change of grading options and schedules
Thu, May 17	Last day for late full Summer Term registration, change of grading options and schedules
Wed, May 23	Last day to drop without record from First Session classes
Mon, May 28	Memorial Day--no classes
Mon, Jun 11	Last day to drop with record of W from First Session classes
Mon, Jun 11	Last day to change Spring Term grades
Fri-Sat, Jun 22-23	Exams--full Summer Term classes do not meet First Session ends after final examinations
Tue, Jun 26	Grades due by 9:00 a.m. Deficiency slips due in Deans' offices
Thu, Jun 28	Grades posted
Thu, Jul 5	Last day to drop without record from full Summer Term classes
Tue, Jul 31	Last day to change First Session grades

,

Third Term – Second Session

,

Fri, Jun 22	Last day to complete registration
Sat, Jun 23	Saturday classes begin
Mon, Jun 25	Second Session classes begin
Tue, Jun 26	Last day for late Summer Term-Second Session registration, change of grading options and schedules
Sun, Jul 1	Last day for Graduate and Doctoral students to apply for August 2012 graduation
Wed, Jul 4	Independence Day--no classes
Thu, Jul 5	Last day to drop without record from Second Session and full Summer Term classes
Mon, Jul 16	Last day to drop with record of W from Second Session and full Summer Term classes
Tue, Jul 31	Last day to change First Session grades
Fri-Sat, Aug 3-4	Exams--Second Session and full Summer Term end after final examinations
Mon, Aug 6	Degrees conferred--no ceremony
Tue, Aug 7	Grades due by 9:00 a.m. Deficiency slips due in Deans' offices
Thu, Aug 9	Grades posted
Tue, Sep 11	Last day to change Second Session and full Summer Term grades

Thematic Clusters

What is a thematic cluster?

- A cluster is composed of a group of courses that focus on a common theme. Each cluster includes at least three courses from three different domains of knowledge.

- The six domains of knowledge are:
    - Arts Study
    - Historical Study
    - Philosophy
    - Physical and Life Science
    - Religious Studies
    - Social Sciences

- Clusters are part of general education. They are not an additional requirement, but a way of organizing some of the existing general education requirements.

Why are thematic clusters required at UD?

- To provide the opportunity for students to discover connections across academic disciplines.
- To enable students to further explore the question of the Humanities Base, "What does it mean to be human?" by focusing on a particular theme.
- To help students engage in a richer and broader learning experience by exploring this theme in a multidisciplinary way.

What are important considerations when choosing a cluster?

- Interest in the theme: Individual interest motivates students to raise important questions and helps connect general education requirements to issues raised in major areas of study.
- Timing: Select a cluster after completing the Humanities Base. This should be by the beginning of the sophomore year. Cluster courses should be planned in conjunction with requirements in the major.

Compatibility with a major: A student may select any cluster. However, some clusters are more compatible with specific majors. Consider how a cluster complements a major area of study and how it is compatible with major requirements. Consult with advisors and departmental chairpersons.

Types of Clusters

The Arts and Human Experience
"Art teaches nothing except the significance of life" -- Henry Miller

The Business Professional in a Global Society
"Leaving the social milieu. The preconceptions. The definitions. The language. The narrowed field of reason. The expectations. No longer expecting relationships, memories, words, or letters to mean what they used to mean. To be, in a word: Open." – Rabbi Lawrence Kushner

Catholic Intellectual Tradition
"At all times the church carries the responsibility of reading the signs of the time and of interpreting them in the light of the Gospel..." -- Vatican Council II, Gaudium et Spes, n. 4

Cross Cultural
"I am a human, and nothing human is alien to me." -- Terence

Perspectives on Global Enviromental Issues
"We have not inherited the world from our ancestors--we have borrowed it from our children."-- Kashmire Proverb

Social Justice
"Let us resolve to be masters, not victims, of our history, controlling our own destiny without giving way to blind suspicions and emotions." -- John F. Kennedy

Values, Technology, & Society
"The open society, the unrestricted access to knowledge, the unplanned and uninhibited association of people for their furtherance--these are what may make a vast, complex, ever growing, ever changing, ever more specialized and expert technological world, nevertheless a world of human community."

--J. Robert Oppenheimer

Women and Culture
"To document the experience of women would mean documenting all of history: they have always been of it, in it, and making it...half, at least, of the world's experience has been theirs, half of the world's work and much of its products." -- Gerda Lerner

Courses approved for each cluster can be found at the following web site:

http://www.udayton.edu/gened/thematic_clusters.php

Courses approved for general education credit can be found at the following web site:

http://www.udayton.edu/gened/approved_courses.php

Self-Defined Cluster

While many thematic clusters have been defined and developed by the faculty, you may choose to define a cluster for yourself. While any student may develop a self-defined thematic cluster, this option is especially relevant to students who study abroad.

Self-defined thematic clusters must meet the goals of clusters:

- To facilitate an integrated view of knowledge,
- To enhance familiarity with the domains of knowledge that are part of general education, and
- To build on the humanities base.

Students wishing to develop a self-defined thematic cluster must write a proposal that:

- Clearly identifies the theme for the cluster.
- Develops a statement of rationale for the theme that explains why the theme is appropriate for general education.
- Lists the courses that will be taken to complete the cluster and explains how each course contributes to or supports the theme. There must be a minimum of three courses. Each course must come from a different domain of knowledge (Arts Study, Historical Study, Philosophy, Physical and Life Sciences, Religious Studies, and Social Sciences. Under certain circumstances, such as study-abroad, one course may be from a domain not included in general education. If such a course is included, the proposal must explain how that course meets the cluster goals. Such a course does not replace a general education domain requirement. Students must still complete all of the general education requirements.). If a course is in one of the general education domains of knowledge but is not approved for general education, the proposal must explain how that course meets the goals of general education. Such a course will count for the general education requirement. Students should ordinarily define a cluster before beginning the coursework.

The approval process is as follows:

- Proposals must be approved by the student's academic advisor and chairperson.
- Proposals are then sent to the Associate Dean for the School of Engineering and then forwarded to the Associate Dean for Connected Learning in the College of Arts and Sciences. The Associate Dean will review the proposal. If the proposal is approved, the Associate Dean will notify the SOE Dean's office and they in turn will notify the student. If the cluster is not approved, the Associate Dean will notify the student and the advisor in writing with a rationale. Students may revise and resubmit proposals.

Special Programs Clusters

By fulfilling the program requirements of the Chaminade Scholar Program and the Core Program the requirements for the Chaminade Scholars cluster and Core cluster are also fulfilled.

Honor Students can fulfill the Honors cluster by completing any approved cluster and integrative project. The project must include information from all three cluster classes taken and address the theme of the cluster. The proposal for the project must be approved by the coordinator of the cluster. The Honors student will earn credit for one Honors designated course for fulfilling the Honors cluster.

Thematic Cluster

You should choose a thematic cluster after careful thought and consultation with your advisors. Ideally, you should select a cluster before completing your first year. Review the thematic cluster pages. Print out this page and fill it out in consultation with your advisor.

Name:_____

Student ID No._____

Major_____

_____ I am declaring a cluster

_____ I am changing to a different cluster

Check the cluster you are now declaring:

_____ The Arts and Human Experience

_____ Business Professional in a Global Society

_____ Catholic Intellectual Tradition

_____ Cross Cultural

_____ Perspectives on Global Environmental Issues

_____ Social Justice

_____ Values, Technology, and Society

_____ Women and Culture

Please note that Honors and Core students register for the clusters through the directors of those programs.

Student Signature _____Date_____

Advisor's Name_____

Advisor's Department_____

Advisor's Signature_____Date_____

Please place a copy of this in the student's file and provide your department office with a copy.

MINORS IN THE SCHOOL OF ENGINEERING

Specialization has become an increasingly important aspect of engineering practice. It is often advantageous for School of Engineering graduates to have both a balanced education in one of the traditional disciplines and specialized training in a specific area complementary to that discipline.

In recognition of this trend, the School of Engineering has a program of minors which, in some cases, may be pursued throughout the existing electives of your current engineering curriculum. The minors program serves the needs of the student by providing options which open avenues of study to fulfill specific educational goals/career objectives.

Election of a minor is strictly at the student's option and does not affect the present credit hour requirements for graduation. This is typically done at the beginning of the student's junior year. There is no penalty for discontinuing a minor program of study provided the unfulfilled balance of free and technical electives are taken in accordance with current degree requirements. Successful completion of a minor will be recorded by its formal title on the student's official transcript.

A minor consists of at least 12 semester hours of coursework sequenced such that the program of study can be completed in the third and fourth years of study. The first course in each minor will usually satisfy any prerequisite requirements for subsequent courses in that minor. Moreover, the first course will usually provide the necessary technical background needed by those students entering the program from other engineering disciplines. The courses in a minor are taken for **undergraduate credit, grading option 1 only**. Courses required for the minor may not be offered every term.

To designate a minor, the ***Request for Approval of a Minor*** form, page 18 of this booklet is available in the Office of the Dean of Engineering (KL 266), and should be completed by the student and signed by the chair of the School of Engineering department offering the minor. The form should then be submitted to the Office of the Dean, KL 266. When the minor has been successfully completed, the dean will notify the Registrar's Office, and the minor will become a part of the student's permanent record. In some instances, it may be beneficial to the student to substitute courses in an approved minor program. Such changes can be submitted on the ***Request for Approval of a Minor*** form and must be approved by the student's advisor, appropriate department chairperson, and the dean.

An undergraduate student who wishes to complete a minor in an area outside of the School of Engineering may do so by completing the courses selected by the department offering the minor. In addition to the 12 semesters there will likely be additional prerequisite courses.

Detailed descriptions of the School of Engineering minors are provided in this brochure. It is anticipated that additional minors will evolve on a continuing basis from faculty-student endeavors. A special minor, not listed, can be created with the approval of the advisor, the chairperson offering the minor, and the School of Engineering Academic Committee.

Recommended Minors in CME

For a complete list of minors, please refer to

http://www.udayton.edu/engineering/areas_of_study.php

As part of the requirements for the CME degree, the following electives can be used to satisfy a minor.

Chemistry/Biology Elective	3 credit hours
Chemical Engineering Elective	3 credit hours
Engineering/Science Elective	3 credit hours
Engineering/Science Elective	3 credit hours

Bioengineering (BIE)

Description: This is open to chemical, civil, computer, electrical, and mechanical engineering majors. The program is designed to expose the student to the use of engineering principles in the biological systems and applications.

Two required courses:

BIO 151	Concepts of Biology I **-OR-**
BIO 152	Concepts of Biology II
CME 490	Introduction to Bioengineering

Select one course from:

CME 491	Biomedical Engineering
MEE 530	Biomechanical Engineering

One of the following electives:

BIO 151	Concepts of Biology I
BIO 152	Concepts of Biology II
BIO 312	General Genetics
BIO 403	Physiology I
BIO 411	General Microbiology
BIO 440	Cell Biology
CHM 420	Biochemistry
CHM 451	General Biochemistry I
CHM 452	General Biochemistry II
CME 491	Biomedical Engineering
CME 492	Chemical and Bio Sensors
MEE 530	Biomechanical Engineering

Composite Materials Engineering (CMA)

Description: This minor is open to civil, chemical, and mechanical engineering majors. The program is designed to expose the student to the design, processing, and characterization of composite materials and their various applications in industry.

Students receiving a Composite Materials Engineering Minor will be required to take four courses total – two required courses and two electives. The required courses and electives are listed below.

Two Required Courses

CME/MAT 510	High Performance Thermostat Polymers
CME 512/MAT 542	Advanced Composite Materials and Processing

Choose two electives from the list below:

CME/MAT 509	Introduction to Polymer Science - Thermoplastics
CME/MAT 527	Methods of Polymer Analysis
CEE/MAT 540	Composite Design
CEE/MEE 546`	Finite Element Analysis I
CEE/MAT 543	Analytical Mechanical-Composite Materials
CME/MAT 580	Polymer Decomposition, Degradation, and Durability

Environmental Engineering (EVE)

Description: This minor, which is open to all non-civil engineering majors. The program defines contemporary problems of pollution and identifies the technological approaches necessary to preserve the quality of our environment.

Any four of the following not already required. It is recommended the minor include one course pertaining to water, air, and solid.

CEE 434	Water & Wastewater Engineering
CME/CEE 562	Physical & Chemical Water & Wastewater Treatment Processes
CME/CEE 563	Hazardous Waste Engineering
CME/CEE 564	Solid Waste Engineering
CME 565	Fundamentals of Combustion
CME/CEE 574	Fundamentals of Air Pollution Engineering I
CME/CEE 575	Fundamentals of Air Pollution Engineering II
CME/CEE 576	Environmental Engineering Separation Processes
CHM 341	Environmental Chemistry

Pre-Med Preparation for Engineering Students:

The courses required by the majority of medical schools include:
Note: See a pre-med adviser for further approval

BIO 151	Concepts of Biology I: Cell and Molecular Biology	3 Cr. Hrs.
BIO 151L	Biological Laboratory Investigations I: Cell Molecular Biology	1 Cr. Hr.
BIO 152	Concepts of Biology II: Evolution and Ecology	3 Cr. Hrs
BIO 152L	Biological Laboratory Investigations II: Evolution and Ecology	1 Cr. Hr.
CHM 123 and 123L*	General Chemistry I and Lab	4 Cr. Hrs.
CHM 124 and 124L*	General Chemistry II and Lab	4 Cr. Hrs.
PHY 206*	General Physics I	3 Cr. Hrs.
PHY 207*	General Physics II	3 Cr. Hrs.
PHY 201L*	General Physics Laboratory	1 Cr. Hr.
	(A higher level engineering lab may be substituted.)	
CHM 313 and 313L*	Organic Chemistry I and Lab	4 Cr. Hrs.
CHM 314 and 314L*	Organic Chemistry II and Lab	4 Cr. Hrs.

* Already part of the CME sequence

It is recommended that a student take a course in physiology and a course in microbiology.
For Chemical Engineering Students:

BIO 411	General Microbiology	3 Cr. Hrs.
BIO 403	Physiology I	3 Cr. Hrs.

Materials Engineering (MAT)

Description: This minor is open to all engineering majors. This minor is a general overview of materials with elective courses in polymers, composites, nanomaterials, and material characterization.

Students receiving a Materials Engineering Minor will be required to take four courses total – two required courses and two electives. The required courses and electives are listed below.

Two Required Courses:

MAT 501	Principles of Materials I
MAT 502	Principles of Materials II

Choose two electives from the list below:

MAT 504	Techniques of Materials Analysis
MAT 506	Mechanical Behavior of Materials
MAT 507	Introduction to Ceramic Materials
MAT 508	Principles of Material Selection
CME 509/MAT 509	Introduction to Polymer Science - Thermoplastics
CME 510/MAT 510	High Performance Thermostat Polymers
CME/MAT 511	Principles of Corrosion
MAT 512	Engineering Magnetic Materials
MAT 513	Advanced Magnetic Materials
MAT 521	Nondestructive Evaluation
CME/MAT 527	Methods of Polymer Analysis
CME/MAT 528	Chemical Behavior of Materials
CME 512/MAT 542	Advanced Composites
MAT 535	High Temperature Materials
MAT 541	Experimental Mechanics of Composite Materials
MAT 543	Analytical Mechanics of Composite Materials
MAT 544	Mechanics of Composite Structures
MAT 575	Fracture and Fatigue of Metals and Alloye I
MAT 577	Light Structural Metals
CME/MAT 579	Materials for Advanced Energy Applications
CME/MAT 580	Polymer Decomposition, Degradation, and Durability
MAT 590	Selected Readings in Materials Engineering
MAT 595	Special Problems in Materials Engineering
MAT 601	Surface Chemistry of Solids
MAT 604	Nanostructured Materials
MEE 312	Engineering Materials I
MEE 505	Thermodynamics of Solids

Polymer Materials (PME)

Description: This minor is open to all engineering majors. Coverage of polymers including thermosets and thermoplastics and composite materials in which polymers are used as constituents. Methods of polymer processing and polymer characterization are also included.

Students receiving a Polymer Materials Minor will be required to take four courses total – two required courses and two electives. The required courses and electives are listed below

Two Required Courses:

CME/MAT 509	Introduction to Polymer Science - Thermoplastics
CME/MAT 510	High Performance Thermostat Polymers

Select two of the following courses:

CME/MAT 527	Methods of Polymer Analysis
CME/MAT 528	Chemical Behavior of Materials
MAT 540	Composite Design
CME 512/MAT 542	Advanced Composites
MAT 543	Analytical Mechanics of Composite Materials
CME/MAT 580	Polymer Decomposition, Degradation, and Durability

Concentation in Energy Systems

Description: The Energy Systems Concentration provides an interdisciplinary concentration in energy systems and its social consequences. Students completing this concentration would find themselves prepared for jobs in both industrial and building energy systems, the market for which has been growing rapidly.

Students in the Energy Systems Concentration would be required to take the following courses:

Core CME Courses
CME 203 – Materials and Energy Balances
CME 311 – Chemical Engineering Thermodynamics
CME 324/325/326L – Transport Phenomena I, II and lab
CME 465 – Fluid Flow and Heat Transfer
CME 466L – Unit Operations Lab
CME 430/431 – Design I and II

CME Elective (Choose 1 from the list below)
CME 486/586 – Petroleum engineering
CME 524/MEE 575 – Fundamentals and Applications of Fuel Cells
CME 565 – Fundamentals of Combustion
CME 574 – Fundamentals of Air Pollution Engineering I

Technical Electives (Choose 2 of the following if not chosen for CME elective)

CME 486/586 – Petroleum engineering
CME 524/MEE 575 – Fundamentals and Applications of Fuel Cells
CME 565/MEE 560 – Fundamentals of Combustion
CME 574 – Fundamentals of Air Pollution Engineering
MAT 590 – Energy Materials
MEE 420/569 – Energy Efficient Buildings
MEE 471/571 – Design of Thermal Systems
MEE 474/574 – Energy Efficient Manufacturing
MEE 472/572 – Renewable Energy Systems
CME 507/MEE 511 – Advanced Thermodynamics
MEE 413/513 – Propulsion
AEE/MEE 565 – Advanced Propulsion Systems
MEE 590 – Aviation and Jet Fuels

The students must in addition to an Ethics course take
ASI 320 – Cities and Energy (satisfies History requirement) or other approved humanities elective connected to Energy Systems

REQUEST FOR APPROVAL OF A MINOR

UNIVERSITY OF DAYTON
"MBA-READY"
ENGINEERING PROGRAM SUMMARY

Have you considered the advantages of having an Engineering degree PLUS a Masters degree in Business Administration? This is one of the most marketable degree combinations today.

By planning your engineering program properly you can meet all of the prerequisites for the UD MBA program, and be "MBA-Ready" at graduation time. There is no wasted time, money, or effort!

- The "MBA-Ready" engineering program is a coordinated effort between the School of Engineering and the School of Business to make it possible for a graduating engineer to go directly into the UD MBA program having met all of the business foundation requirements and ready to complete the MBA with one year of MBA course work.

- The "MBA-Ready" Program is designed for engineering students who want to pursue an MBA degree immediately upon completion of their undergraduate program.

- Completion of the "MBA-Ready" Program will qualify for a minor in Business.

- It will also fulfill all UD MBA pre-requisites prior to entrance into the UD MBA program.

- If you complete the MBA-Ready program you will receive an undergraduate minor in Business Administration.

- Completing the coursework does not guarantee admission into the MBA program. You must complete the GMAT examination and apply to the MBA program.

- Students must receive a minimum grade of C- in all of the above listed MBA foundation classes.

- Please schedule a meeting with the MBA graduate office in Mirial Hall 306 prior to taking any MBA classes.

If you are interested in the MBA Ready Program, please contact:

Janet Leonard
Senior Academic Advisor
School of Business Administration
Miriam Hall Room 211
(937) 229-2259
Janet.Leonard@notes.udayton.edu

MBA READY PROGRAM REQUIREMENTS

Course	Prerequisites	Title	Term	Credits
MGT 301	JR	Organizational Behavior	Fall/Winter/Summer	3
ECO 300 Or ECO 203 &204	MTH 168 & EGR Student	Micro & Macro Economics	Winter	3 3/3
ACC 300 A&B or ACC 207 & ACC 208	Soph/EGR Student Soph/BAI 103L	Financial & Managerial Accounting	Fall/Winter	4 3 3

* Once completed, students have also earned a minor in Business Administration.

Registration on the Web

Students can register on line using Porches. Students pick courses they want approved; second, inform your advisor by e-mail that your course selections have been made and ask for advisor approval; third, after advisor approval has been obtained, students can then register on the web on the assigned day and time as noted in the composite. *You may register later than your assigned date, but not earlier*. Detailed instructions are printed in the class composite published each semester. .

Courses Taken Elsewhere for Transfer Credit

In the summer, or during terms away from campus (e.g., on co-op work assignment), it is sometimes advantageous for students to take one or more courses at another accredited institution. Before you register at the other school, the class has to be approved by the Department Chair. The procedure is as follows - obtain a copy of the "**Transient Student Permit Form**" available in the department office or the dean's office. Complete the top half, (name, address, course you are planning to take at the other school, and name of other school, and whether they are on semesters or quarters). A copy of the course description from the other institution is required. This is the 2-4 sentence long description from the other school's bulletin. When this is complete, leave it with the department office and the chair will review. After the chairman has reviewed this information, and assuming the course is O.K.'d, you will take the forms down to the Dean's office KL-266 and they will advise you of the next step in the procedure. Provided a grade of "C-" or better is obtained, the course will transfer to UD. After the course is completed, it is the student's responsibility to request a copy of the transcript be sent to:

School of Engineering Dean's Office
Kettering Lab Room 266
University of Dayton
300 College Park
Dayton, Ohio 45469-0228

The course is then counted as transfer credit, but is not figured into the student's cumulative grade point average.

TRANSIENT STUDENT PERMIT FORM

The course description(s) for the course(s) you intend to take at another institution must accompany this form.

Student ID Number: _____

Student's Name: _____
First Middle Last

Substitution for Required Courses - Request to Modify Program of Study

The Faculty of Chemical Engineering have carefully designed the curriculum to ensure our graduates are well prepared to undertake a professional career, and to ensure that all accreditation and university requirements are met. Thus, substitution for a required course in the curriculum is not routinely approved. Nevertheless, there are occasionally circumstances in which such substitution is justified, and will be permitted with the necessary approvals. The form, "**Request to Modify Program of Study**", is available in the department office as well as the dean's office. Complete the form (including why the substitution should be approved), then leave it with the Department Chair to review and a decision will be made.

Drop/Add Procedure

Prior to the first day of each term or session, a student is permitted to drop/add a class electronically from the web registration web site. It is strongly encouraged that you discuss all changes in your schedule with your advisor.

After classes begin for each term, if a student wants to alter their schedule, a drop/add form must be completed, and signed by an advisor. Drop/Add forms are available in the Chemical Engineering Department or the Registration Office in Albert Emanuel Hall. A list of important dates with respect to adding or withdrawing from a class, is printed in the first few ages of the composite each semester.

PLEASE NOTE: Students are responsible for monitoring their own progress in completing requirements for graduation. Drop/adds which are made without a discussion with your advisor and which may result in non-fulfillment of requirements will not be corrected by substitutions and waivers.

UNIVERSITY OF DAYTON SCHOOL OF ENGINEERING	REQUEST TO MODIFY PROGRAM OF STUDY

This form is used to request a modification of a School of Engineering program of study. The decision on the request will be mailed to the student.

This section is to be completed by the student and then brought to the Department Chairperson for review and recommendation to the Dean of Engineering.

Engineering/Science, Chemical Engineering, Chemistry, and Ethics Requirements

Revised 8/11

* Selection of technical electives is an important decision affecting minors and preparation for jobs and graduate school. Students are strongly advised to consult with a CME academic advisor to discuss the options and constraints that apply to their situation.

* Chemical Engineering courses, Engineering courses, and Science courses can be used as technical electives

* The Engineering/Science classes can be used to complete a minor.

* Engineering Technology classes **cannot** be accepted as engineering/science requirement.

* Honors Thesis (EGR 498) can be used as technical elective. Engineering Systems Design Seminar (EGR 320) cannot be used for an engineering/science requirement.

* **PHY 250 Descriptive Astronomy does not count as a technical elective.**

* Most common classes taken are in bold letters. Pre-requisites to courses are in parentheses.

Chemical Engineering

Any course that is not a required class can be taken.

CME 409 Introduction to Polymer Science – Thermoplastics (CME 311, CHM 314)
CME 410 High Performance Thermoset Polymers (Organic Chemistry), permission of instructor
CME 412 Advanced Composites (CME 409 or CME 509 or MAT 501 or consent of instructor)
CME 432 Chemical Product Design
CME 486 Introduction to Petroleum Engineering
CME 490 Introduction to Bioengineering (CME 324, CME 306 co-req)
CME 491 Biomedical Engineering
CME 492 Chemical Sensors & Biosensors
CME 499 Special Problems

CME 507 Advanced Thermodynamics
CME 509 Introduction to Polymer Science - Thermoplastics (College Chemistry; physics and differential equations)

CME 510 High Performance Thermoset Polymers (Background in differential equations, organic or physical chemistry, or CME 509)
CME 511 Principles of Corrosion (MAT 501)
CME 512 Advanced Composites (MAT 501, MAT 509 or perm of instructor)
CME 515 Statistical Thermodynamics (CME 311, MTH 219)
CME 521 Advanced Transport Phenomena
CME 524 Electrochemical Power
CME 525 Design of Macromolecular Systems (CHM 314; CME 510 or consent of instructor)
CME 526 Polymer Engineering (CME 510 or consent of instructor)
CME 527 Methods of Polymer Analysis (CME 509, 510 or consent of instructor)
CME 528 Chemical Behavior of Materials (CHM 123 or permission of instructor)
CME 532 Chemical Product Design (CME 311, 324 or consent of instructor)
CME 541 Process Dynamics
CME 542 Chemical Engineering Kinetics (CME 406 and CME 381 or equivalent)
CME 543 Chemical Reactor Analysis and Design (CME 406 & CME 381 or equivalent)
CME 550 Agitation (CME 412 or consent of instructor)

CME 562 Physical and Chemical Wastewater Treatment Processes (CHM 123 and CME 411 or consent of instructor)
CME 563 Hazardous Waste Engineering (CHM 123 and CME 411 or consent of instructor)
CME 564 Solid Waste Engineering (CHM 123 and CME 411 or consent of instructor)
CME 565 Fundamentals of Combustion (CME 311, CME 306 or consent of instructor)
CME 574 Fundamentals of Air Pollution Engineering I (CME 311, CME 324 or consent of instructor)
CME 575 Fundamentals of Air Pollution Engineering II (CME 574 or consent of of instructor)
CME 576 Environmental Engineering Separation Processes
CME 579 Materials for Advanced Energy Application
CME 580 Polymer Decomposition, Degradation, and Durability
CME 582 Advanced Chemical Engineering Calculations II
CME 583 Process Modeling (CME 582 or equivalent)
CME 586 Introduction to Petroleum Engineering
CME 590 Introduction to Bioengineering
CME 591 Biomedical Engineering
CME 592 Chemical Sensors and Biosensors
CME 595 Special Problems in Chemical Engineering

Biology

BIO 151 Concepts of Biology I: Cell and Molecular Biology
BIO 152 Concepts of Biology II: Evolution and Ecology (BIO 151)
BIO 312 General Genetics

BIO 350 Applied Microbiology (BIO 340)
BIO 403 Physiology I (BIO 101-102 or 151-152, CHM 313-314)
BIO 404 Physiology II (BIO 403)
BIO 411 General Microbiology (BIO 101-102 or 151-152, CHM 313-314)
BIO 415 Neurobiology (BIO 151-152, CHM 123-124)
BIO 440 Cell Biology (BIO 101-102 or 151-152, CHM 313-314)
BIO 462 Molecular Biology (BIO 312, CHM 314)

Chemistry

Any course that has CHM 124 as a prerequisite.

CHM 201 Quantitative Analysis (CHM 124, 124L; Concurrent with CHM 201L)
CHM 201L Quantitative Analysis Lab
CHM 303 Physical Chemistry (CHM 201 or equivalent, CHM 303; co-requisite MTH 218; Concurrent with 303L)
CHM 303L Physical Chemistry Lab
CHM 304 Physical Chemistry
CHM 304L Physical Chemistry Lab (MTH 218 co-requisite)
CHM 341 Environmental Chemistry (CHM 314 or permission of instructor)
CHM 341L Environmental Chemistry Lab (Co-requisite CHM 341)
CHM 415 Analytical Chemistry (CHM 201, 201L, 302 or 304; Concurrent with 415L)
CHM 415L Analytical Chemistry Lab
CHM 417 Inorganic Chemistry (CHM 124, 314; co-requisite CHM 302 or 304)
CHM 418L Inorganic Chemistry Laboratory (CHM 201L, 314L; co-requisite CHM 417)
CHM 420 Biochemistry (CHM 314)
CHM 427 Medicinal Chemistry (CHM 314 and CHM 420 or CHM 451)
CHM 451 General Biochemistry I (CHM 201, 314)
CHM 452 General Biochemistry II (CHM 451)
CHM 462L Biochemistry Laboratory (CHM 420 or 451)
CME 528 Chemical Behavior of Materials

Civil & Environmental Engineering

CEE 213 Surveying
CEE 214 Highway Geometrics
CEE 215L Surveying Field Practice
CEE 304 Advanced Strength of Materials
CEE 311L Civil Engineering Materials Laboratory
CEE 312 Geotechnical Engineering
CEE 312L Geotechnical Engineering Laboratory
CEE 313 Hydraulics
CEE 313L Hydraulics Laboratory
CEE 316 Analysis of Structures I

CEE 403 Transportation Engineering

CEE 411 Design of Steel Structures
CEE 412 Design of Concrete Structures
CEE 421 Construction Engineering
CEE 422 Design and Construction Project Management
CEE 434 Water and Wastewater Engineering
CEE 434L Water & Wastewater Engineering Laboratory
CEE 450 Civil Engineering Design
CEE 463 Hazardous Waste Engineering

Computer Science

CPS 132 Computer Programming for Engineering and Science (Co-requisite MTH 168)
CPS 150 Algorithm & Programming I (4 credit hour)
CPS 151 Algorithm & Programming II (4 credit hour, CPS 150)
CPS 250 Introduction to Computer Organization
CPS 346 Operating Systems I (CPS 250, 350)
CPS 350 Data Structures & Algorithms (CPS 250)
CPS 353 Numerical Methods I (MTH 169, CPS 132 or 150)

Electrical and Computer Engineering

Any course that is not a required class can be taken.

ECE 201 Circuit Analysis (MTH 169, Concurrent with ECE 201L)
ECE 204 Electronic Devices (EGR 203; Co-Req ECE 204L)
ECE 215 Introduction to Digital Systems (EGR 203; Co-Req ECE 215L)
ECE 303 Signals and Systems (ECE 204; MTH 218; Co-Req ECE 303L)
ECE 304 Electronic Systems (ECE 303; Co-req ECE 304L)
ECE 314 Fundamentals of Computer Architecture (CPS 132 or CPS 150; ECE 215; Co-Req ECE 314L)
ECE 401 Communication Systems (ECE 304; 340; Co-req ECE 401L)
ECE 401L Communication Systems Lab (ECE 304; Co-Req ECE 401)
ECE 414 Electro-Mechanical Devices (ECE 202, ECE 333)

Engineering Mechanics

EGM 202 Dynamics (EGM 201)
EGM 303 Strength of Materials (EGM 201)
EGM 445 Finite Element Applications (EGM 303, MTH 219)

Geology

GEO 115 Physical Geology
GEO 208 Environmental Geology (GEO 109 or 115, permission of instructor)
GEO 218 Engineering Geology
GEO 309 Surface and Groundwater Hydrology (GEO 109 or GEO 218 or permission of instructor)
GEO 412 Introductory Geochemistry (GEO 201, or permission of instructor)

Industrial and Systems Engineering

ISE	**400**	**Probability and Statistics for Engineers (MTH 218)**
ISE	411	Operations Research I (MTH 368 or ISE 369; CPS 132)
ISE	412	Operations Research II (MTH 368 or ISE 369; CPS 132)
ISE	430	Engineering Economy (not recommended since this is covered in Design I)
ISE	441	Production and Inventory Planning and Control (MTH 368 or ISE 369;
ISE	455	Principles of Systems (MTH 368 or ISE 369; CPS 132)
ISE	460	Quality Assurance (MTH 368 or ISE 369; CPS 132)
ISE	461	Design and Analysis of Engineering Experiments
ISE	465	Reliability and Maintainability (MTH 368 or ISE 369; CPS 132)

Mathematics

MTH	310	Linear Algebra and Matrices (MTH 218 or perm of instructor)
MTH	**367**	**Statistical Methods I (MTH 149, or 169)**
MTH	368	Statistical Methods II (MTH 367)
MTH	403	Boundary Value Problems (MTH 219)
MTH	411	Probability and Statistics I (MTH 218)
MTH	412	Probability and Statistics II (MTH 411)
MTH	440	Introduction to Mathematical Modeling (MTH 219, 302 or permission of instructor)

Mechanical Engineering

Any course can be taken.
Strength and Materials is a prerequisite for many of the classes so it is listed here.

EGM	**303**	**Strength and Materials (EGM 201)**
MEE	312	Engineering Materials I (PHY 208, EGM 303, MEE 301 or **permission)**
MEE	**313**	**Engineering Materials II (MEE 312 or permission of instructor)**
MEE	401	Aerodynamics (MEE 308)
MEE	402	Energy Conversion Systems (MEE 302 or CME 311 or MCT 232)
MEE	413	Propulsion
MEE	417	Internal Combustion Engines (MEE 301 or permission)
MEE	420	Energy Efficient Buildings
MEE	471	Design of Thermal Systems
MEE	473	Renewable Energy Systems
MEE	478	Energy Efficient Manufacturing

Physics

Any course that has PHY 206 as a prerequisite.

PHY 208	General Physics III - Mechanics of Waves

Graduate Classes

The following are acceptable graduate classes:

CEE	546	Finite Element Analysis
CEE	560	Industrial/Domestic Waste Treatment
CEE	562*	Physical and Chemical Wastewater Treatment Processes
CEE	563	Hazardous Waste Treatment
CEE	564*	Solid Waste Engineering
CEE	580	Hydrology and Seepage (CIE 312, 313)
CEE	582	Advanced Hydraulics (CIE 313)
CME	507	Advanced Thermodynamics
CME	**509**	**Introduction to Polymer Science – Thermoplastics (College Chemistry and Calculus)**
CME	**510**	**High Performance Thermoset Polymers (Background in differential equations, organic or physical chemistry, or CME 509)**
CME	**511**	**Principles of Corrosion (MAT 501)**
CME	**512**	**Advanced Composites (MAT 501, MAT 509 or perm of instructor)**
CME	515	Statistical Thermodynamics (CME 311, MTH 219)
CME	521	Advanced Transport Phenomena (CME 324 or 381 or equivalent)
CME	524	Fundamentals and Applications of Fuel Cells
CME	525	Design of Macromolecular Systems (CHM 314; CME 510 or consent of instructor)
CME	526	Polymer Engineering (CME 510 or consent of instructor)
CME	527	Methods of Polymer Analysis (CME 509, 510 or consent of instructor)
CME	528	Chemical Behavior of Materials (CHM 123 or permission of instructor)
CME	532	**Chemical Product Design**
CME	541	Process Dynamics
CME	**542**	**Chemical Engineering Kinetics (CME 306 and CME 381 or equivalent)**
CME	543	Chemical Reactor Analysis and Design (CME 306 and 381 or equivalent)
CME	550	Agitation
CME	562	Physical and Chemical Wastewater Treatment Processes (CHM 123 and CME 411 or consent of instructor)
CME	563	Hazardous Waste Engineering (CHM 123 and CME 411 or consent of instructor)
CME	564	Solid Waste Engineering (CHM 123 and CME 411 or consent of instructor)
CME	565	Fundamentals of Combustion (CME 311, CME 306 or consent of instructor)
CME	574	Air Pollution Engineering I (CME 311 or MEE 301, 302; CME 324 or MEE 410; or permission of instructor)
CME	575	Air Pollution Engineering II (CME 574 or permission of instructor)
CME	576	Environmental Engineering Separation Processes (Consent of instructor)
CME	579	Materials for Advanced Energy Application
CME	580	Polymer Decomposition, Degradation, and Durability
CME	**582**	**Advanced Chemical Engineering Calculations II**

CME 583 Process Modeling (CME 582 or equivalent)
CME 586 Introduction to Petroleum Engineering
CME 590 Introduction to Bioengineering (CME 324, CME 306)
CME 591 Introduction to Biomedical Engineering
CME 592 Chemical Sensors & Biosensors
CME 595 Special Problems in Chemical Engineering
ENM 541 Production Engineering (ENM 521 or permission of instructor)
ENM 560 Quality Assurance (MSC 501 or equivalent)
ENM 561 Design and Analysis of Experiments (MSC 501 or equivalent)
ENM 575 Introduction to Artificial Intelligence
ENM 577 Introduction to Expert Systems
MAT 501 Principles of Materials I (MTH 219, college chemistry and physics)
MAT 502 Principles of Materials II (MTH 501 or equivalent)
MAT 504 Techniques of Material Analysis (MAT 501 or permission of instructor
MAT 506 Mechanical Behavior of Materials (EGM 303 or permission of instructor)
MAT 507 Introduction to Ceramic Materials (MAT 501)
MAT 508 Principles of Material Selection (MAT 501 or permission of instructor)
MAT 521 Nondestructive Evaluation (Permission of Instructor)
MAT 526 Polymer Engineering (MEE 308, MEE 410, MAT 510)
MAT 527 Methods of Polymer Analysis (MAT 509, MAT 510)
MAT 535 High-Temperature Materials (MAT 501 or equivalent)
MAT 542 Advanced Composites (MAT 501, MAT 509, permission of instructor)
MAT 544 Mechanics of Composite Structures
MAT 570 Fracture Mechanics (MAT 506 or permission of instructor)

MAT 575 Fracture and Fatigue of Metals and Alloys I (MAT 501, MAT 506, or permission of instructor)
MAT 576 Fracture and Fatigue of Metals and Alloys II (MAT 575 or equivalent)
MAT 577 Light Structural Metals
MAT 579 Materials for Adv Energy Applications (consent of instructor)
MAT 580 Polymer Decomposition, Degradation, and Durability
MAT 601 Surface Chemistry of Solids (MAT 501 or permission of instructor)
MEE 530 Biomechanical Engineering
MEE 567 Solar Heating Analysis
MTH 547 Statistics for Experimenters (MTH 367 or equivalent)

*** may be dropped or changed in the future.**

Ethics Requirement

Choose one 3 credit hour course that covers ethics.

PHL 312	Ethics
PHL 313	Business Ethics
PHL 315	Medical Ethics
PHL 316	Engineering Ethics
PHL 317	Ethics and Modern War
PHL 318	Family Ethics
PHL 319	Information Ethics
PHL 321	Environmental Ethics
REL 360	Christian Ethics
REL 365	Christian Ethics and the Environment
REL 367	Christian Ethics and Health Care Issues
REL 368	Christian Ethics and the Business World
REL 369	Christian Ethics and Engineering

Retake Policy

A student who earns a grade of D or F in a course may retake that course at the University of Dayton and remove the original D or F from their cumulative GPA.

If a higher grade is earned in the retaken course the original D or F will not be removed from the student's transcript but will have "same as" and the term the course was repeated in the line of the original course along with the original grade. The original GPA for that term will also remain. The D or F will be removed from the cumulative GPA calculation only after a higher grade is earned and will not be retroactive.

If a lower grade is earned in the retaken course the notation "same as" and term the course was originally taken will be listed with the retaken course along with the grade earned. This grade will not be used in the calculation of the student's cumulative GPA.

Only 15 semester hours may be retaken by any student.

If the same course is retaken twice both courses will be counted toward their maximum retake hours and both previous grades will be replaced.

Exceptions to this policy may be made by the dean (or the dean's designee) of the school or college in which the student is enrolled.

Registrar's Office

The Co-op Program

The co-op program integrates classroom study with employment related to the student's major. Practical work experience is gained ***before*** graduation - and in today's job market, that's a big advantage. Employers vary from small, local firms to multi-national corporations and government agencies and provide unique experiences to undergraduate students.

A student is generally eligible to begin the co-op program in their second semester of their sophomore year but no later than mid-junior year. The co-op program requires alternating semesters of full-time study and full-time work.

Co-operative education allows students to --

- define career goals and evaluate choices
- gain valuable work experience and meet professionals in their chosen field
- reinforce classroom learning
- evaluate an employer over a period of time
- assist in financing education
- improve opportunity for higher starting salary after graduation

Applying to the Co-op Program . . .

Requirements -

- Full-time status as a sophomore or junior undergraduate student at the University of Dayton
- Successful completion of CME 203
- Minimum grade point average - 2.3
- Serious intent to pursue the co-op option through preparation and interview process

Competitive interviews are offered both on campus and at employer work sites. The student makes the final decision whether or not to accept an offer for co-op employment

Visit the Co-operative Education Office located in the Kettering Labs - Room 261 or call 229-2335 (on campus just dial Ext. 92335). The engineering advisor is Nancy Forthofer. The web site address is http://careers.udayton.edu/students/co-op.asp

Internship

Internship opportunities are also available and offer an alternative route to gaining work experience while still completing the degree program in four years. Visit the careerservices@careers.udayton.edu .

Honors Program

Requirements

- For students pursuing the ***Honors*** diploma (thesis option), the 15 Honors credits may include at most 6 credit hours with any specific academic prefix. *For example, at most six credit hours of Honors-level coursework coded as ENG XXX may apply.* The remaining 9 hours must be from other disciplines.

- For students pursuing the ***Honors*** diploma (courses-only option) or ***Honors with Distinction*** diploma, the 21 Honors credits may include at most 9 hours with any specific academic prefix. The breadth requirement does not apply to the credit hours obtained as part of thesis research

Admission

A student may enter the Honors Program in one of three ways:

- An incoming first-year student is automatically designated an Honors student if he or she meets certain criteria:
    - 3.7 GPA or top 10% of high school class, and
    - 29 ACT or 1300 SAT
- By earning a UD cumulative GPA of 3.5 or higher by the end of the first or second year as a full-time student, and having a sufficient number of Honors credits, the student is eligible to become a member. The Honors credits criteria are:
    - 3 Honors credits by the completion of 60 credit hours.
    - 6 Honors credits by the completion of 75 credit hours.
    - 9 Honors credits by the completion of 90 credit hours.
- A transfer student, after the first or second year, with a minimum cumulative GPA of 3.5 or higher, may apply directly to the University Honors Program, where the Honors credits are negotiated on a case-by-case basis.

Special Benefits and Privileges for University Honors Students

The Honors Program sponsors a variety of speakers, cultural activities and special events for students, including the Honors Symposium and the Honors Art Exhibition:

- Students completing the Honors Program diploma criteria will graduate with a specially notated Honors diploma and key.

- Incoming first-year Honors students are assured academic scholarships through the University's scholarship selection process, provided appropriate application materials are submitted on time.

- Honors students may apply for grants to assist with international study, research or service projects through the University's Cordell W. Hull International Fellows Fund.

- Honors students may apply for grants to assist with Honors Thesis projects and for travel funds to present their research at scholarly or professional conferences. Outstanding thesis projects may be eligible for additional funding through the Patrick F. Palermo Honors Program Founders Fund.

- Honors students receive special library benefits, including the use of the Honors Study Room 403 (visit the library circulation desk staff to check out the room key).

- The Associate Director for Fellowship Advising assists students considering graduate school and students applying for prestigious awards and national competitive fellowships.

- Honors students may participate in the annual **Honors Art Competition and Exhibit**.

- Honors students can enjoy the cultural arts on campus and in the Dayton area (within a 35-mile radius of campus) with help from the University Honors Program:

  - We will subsidizes up to $10 towards a student ticket to the University Arts Series each fall. Just bring us your ticket stub and the receipt in person within 30 days of the performance.

  - We will subsidize tickets (for you and a friend)—half the cost of the ticket up to $10 each—for Dayton-area cultural events. Just bring us your ticket stub and the receipt in person within 30 days of the performance.

- Honors students are guaranteed University housing for four years and are eligible for special Honors housing and Honors residential programming.

Earning Honors Credits

Honors credits may be obtained in a variety of ways.

Situations Where One Credit Hour of Coursework Equals One Honors Credit

- **Honors courses** (as ENG 114) or Honors sections (usually marked "H")
- **Honors-approved LLCs** (may not be coded "H").

  Honors on Globalism:
  PHL 103 G sections = 3 Honors credits
  HST 103 G sections = 3 Honors credits

  School of Business
  ECO 203 H sections = 3 Honors credits

  Sustainability, Energy and the Environment:
  PHL 103 S sections = 3 Honors credits
  HST 103 S sections = 3 Honors credits

- **Graduate-level courses** taken for undergraduate credit
  The University of Dayton Graduate School will allow Honors students to register for all 500-level classes and above, which will count toward the required Honors credits. Students should work closely with their academic advisors as all such course access must be approved through each department's own standards and procedures

- **Contract Honors courses**, with prior approval of the Honors Program and the Department; limited to two contract courses per student. Note that Honors courses taken as part of a study abroad are counted as contract courses and contribute to the maximum contract course credit limit.

  Since an Honors course is fundamentally different from a non-Honors course, the University Honors Program believes that the contract course option should be used as infrequently as possible. These courses are, however, possible options for students whose opportunities for obtaining the necessary credits to graduate with a University Honors Program diploma are seriously limited.

  The UHP also acknowledges that each department or program makes the final decision whether or not to offer the ability to contract for Honors credits through a regular course offering. In all cases, the Department Chair or Program Director, the course instructor, the Honors student and the Honors Program Director must all agree to the proposal for Honors credits through a contract course. PLEASE NOTE that the Biology Department does not offer contract courses at this time.

  Restrictions
  - The contract course option may be used only after the completion of 75 credit hours
    of coursework.
  - The contract course must be taken for a letter grade.
  - The student must earn a grade of B or higher to earn Honors credits.
  - A grade of B- or lower results in the course not counting for Honors credits.

- **Chaminade Scholars** earn 6 Honors credit hours.

  Year 1: REL 356 = 3 Honors credits
  Year 3: ASI 358 = 3 Honors credits

  Situations Where One Credit Hour of Coursework
  Equals Less Than One Honors Credit

  CORE completion earns 15 Honors credits.
  - Completing year 1, ASI 111-112 (12 credit hours) = 6 Honors credits
  - Completing year 2, three courses (9 credit hours) = 6 Honors credits

- Completing year 3, "Professional Ethics in a Global Community" (3 credit hours) = 3 Honors credits

Additional Ways to Earn Honors Credit Hours

- **Study Abroad**: Students participating in a summer or semester study abroad experience (with a minimum of 6 UD academic credit hours) earn 3 Honors credits per study abroad. A maximum of two such study abroad experiences can be used to earn a total of 6 Honors credits.

  Honors credits for Honors courses successfully completed and taken as part of a study abroad are counted separately; however, they are considered contract courses and contribute to the maximum contract course limit of two.

- **Substantial scholarly activities in which no academic credit hours are earned**.

  - The University Honors Program recognizes that many activities are fundamental to the development of the emerging scholar for which no academic credit is received. The Honors Program acknowledges these activities with Honors credits that apply toward the requirements for the ***Honors*** and ***Honors with Distinction*** diplomas.
  - Activities that may include a substantial scholarly component are (but not limited to), for example, Spring Breakouts, cultural immersions, ETHOS participation and research experiences for undergraduates. Likewise, participation in the above activities does not necessarily result in the awarding of Honors credits.
  - At the discretion of the Honors Program leadership, non-academic credit experiences may earn 1, 2 or 3 Honors credits. Approved activities will typically earn 1 Honors credit, with the exceptional activity earning 2. In rare circumstances, 3 Honors credits may be granted for an activity.
  - A maximum of 3 Honors credits may be applied to the requirements of the Honors Program diploma through non-academic credit work.
  - Honors students interested in obtaining Honors credits for non-academic credit work must request such consideration prior to the experience and must submit an Honors Credits Application for Non-Academic Credit Work, including a letter of support from a faculty advisor.

Minority Engineering Program

The Minority Engineering Program (MEP) helps support minorities engineering students. It is open to African American, Hispanic American or Native American who want a career in engineering. The students in this program are clustered together in their first-year chemistry, physics and math classes. They also meet twice a week at enrichment workshops during the first year. The students are assigned a junior or senior engineering student as a mentor to help them adjust to campus life as well as a mentor from local industry. MEP students are required to attend Professional and Team Building Development seminars their first year. The first semester the seminar focuses on specific job functions of engineers. The second semester the focus is co-oping and internships. The goal of MEP is to help minority students develop a circle of support to help them succeed at their engineering studies.

Enriched Engineering Program

The Enriched Engineering Program (EEP) helps support students who are at the low end of our acceptance criteria. The students in this program are clustered together in their first-year chemistry, physics and math classes. See below for a listing of the potential clustered courses. They are also clustered in EGR100 sections together. They are required to attend enrichment workshops twice a week. Enrichment workshops give students an opportunity to study with their peers with upper-class engineering students as facilitators. The facilitators are available to assist the students with technical coursework. The goal is to help students develop both a solid foundation in their engineering skills as well as a support structure to help them succeed at their engineering studies.

Potential cluster courses for EEP

MTH137	CHM123	PHY206
MTH138	CHM124	
MTH168		
MTH169		

Get Involved

- American Institute of Chemical Engineers (AIChE) . . .

  The student branch of the American Institute of Chemical Engineers actively participates in student activities such as Engineers' Week and social events. Industrial speakers and plant tours help familiarize the chemical engineering student with professional opportunities after graduation. Contact the departmental office at 229-2627 or in Kettering Lab Room 445 to get additional information.

- Society for the Advancement of Materials and Process Engineering (SAMPE) . . .

  Contact the CME department office in Kettering Lab 445 or 229-2627 to get contact information.

- Society for Women Engineers (SWE) . . .

  Holds regular meetings to develop the professional and social skills of the members though social activities, speakers and workshops. Contact Dr. Laura Bistrek, Kettering Lab Room 261 for further details. Their web address www.udayton.edu/~swe/

- Tau Nu Kappa . . .

  Tau Nu Kappa is an honorary for students involved in different engineering organizations. To qualify, students must be involved in at least two engineering activities, some of which are listed above. Their web address www.udayton.engr.udayton.edu/stud for additional information.

- Tau Beta Pi . . .

  Tau Beta Pi is the National Honor Society for engineers in all disciplines. Academic standing during the junior and senior years determines eligibility. Students are notified of their eligibility each semester. Activities include tutoring, socials, and service events. Their web address is www.udayton.edu/~tbp/ for additional details.

- Christmas on Campus - December 12 (COC) . . .

  Each year UD students host approximately 1,300 City of Dayton Children for an evening of fun, food, and entertainment. On December 12, the event is put into action with the annual house-decorating contest in the Student Neighborhood. The COC committee is composed of student volunteers who work to plan and implement this event. Contact the Office of Student Development to get involved. Their web address is www.udayton.edu/~coc/ for additional details. Check with the Office of Student Development and UD's web site to see what else is available. The University of Dayton web site is located at www.udayton.edu. The web page address for the Office of Student Activities is www.udayton.edu/~studact/.

Information for the New Chemical Engineering Student

Information we know you will find useful . . .

→ Enrichment Workshops . . .

These workshops are conducted once each week for 2 hours and are staffed by highly motivated upper class engineering students (and monitored by a faculty member). They provide a means for engineering students to work in a collaborative learning environment with other first-year students and upper class engineering students. This is a good way to exchange information, ideas, and sort out problems with respect to courses - in particular calculus, physics, and chemistry.

→ If you fall behind in a course . . .

When you first become aware that you are falling behind in a course, you should ***immediately*** see your instructor to arrange for extra help. All faculty members maintain office hours so as to be available to students, but you must take the initiative in asking for help. You are now in a professional course of study and you have a responsibility to yourself to get the best education you possibly can. One can fall behind in a course by "cutting class" or sleeping in class. You (or your parents) are paying a lot of money for your education - get your money's worth by attending class and getting help if you are having difficulty understanding any of the material.

→ Can I get individualized tutoring?

You have several options -- ask you instructor if he can recommend someone to help you with private tutoring. Ask your advisor if he can make arrangements through the department for individualized help. Or, check out the Learning Assistance Center in Room 131 Gosiger Hall - they provide services to all students regardless of ability or achievement level. Tau Beta Pi also offers regular tutoring hours. Signs posting the hours and locations can be found in Kettering Labs. In addition, many students gather in the chemical engineering lab in the Science Center to work and study with each other.

→ Academic Regulations . . .

Become familiar with the academic regulations of the University of Dayton. The University accepts no excuses for ignorance of these regulations. Be sure that you know how to compute a GPA, and be sure that you know the prerequisites for the courses that you must take. Additional information can be found at

http://bulletin.udayton.edu/index.jsp

Faculty of the Department of Chemical Engineering

Mr. Thane Brown, Part-Time Instructor, B.S. Oregon State University (1961), retired Director of North American Engineering for Proctor & Gamble

Dr. Charles E. Browning, Department Chairman**,** Professor, Ph.D., University of Dayton (1976). Research interests composite materials

Dr. Amy Ciric, Senior Lecturer, Ph.D., Princeton University (1990). Research interests lie in the areas of process Synthesis and optimization and non ideal distillation.

Dr. Donald A. Comfort, Assistant Professor, Ph.D., North Carolina State University (2006). Research interests – biocatalysts, bioremediation.

Dr. Matthew J. Dewitt, Assistant Professor and UDRI Joint Appointee, Ph.D., Northwestern University (1999). Oxidative and pyrolytic reaction chemistry; quantitation and mitigation of emissions from combustion sources; hydrocarbon fuel chemistry and engineering

Dr. Michael J. Elsass, Lecturer, Ph.D., The Ohio State University (2001). Research interests are in the areas of data analysis, decision support, diagnostics and modeling knowledge in chemical engineering operations

Dr. Daniel Eylon, Professor, Ph.D., Israel Institute of Technology (1987). Research interests titanium technology, fatigue failure, microstructure mechanical properties and powder metallurgy.

Dr. Joseph Fellner, Part-Time Instructor, Ph.D. University of Dayton (1997).

Dr. Lawrance Flach, Professor; Ph.D., University of Colorado at Boulder (1989). Research interests are in the areas of process control, numerical methods, and mathematical modeling.

Dr. Joel Fried, Professor, Ph.D., UMASS (Amherst) (1976). Research interests are in membrane separation and transport, computational chemistry, molecular simulations, polymer blends and composites, biomimetic membranes, proton transfer in fuel cell membranes, ion and small molecule transport through membrane proteins.

Dr. Scott Gold, Associate Professor, Ph.D. Arizona State University. Research interests are in nanostructures materials and composites, surface chemistry, conjugated polymers, and electrochemical energy technologies.

Ms. Beth Hart, Special Programs Co-ordinator, M.S., University of Dayton (1992).

Dr. Donald A. Klosterman, Assistant Professor and UDRI Joint Appointee, Ph.D., The University of Dayton (1994). Research interests are composite and polymer engineering.

Dr. Khalid Lafdi, Professor, Ph.D., (1989). Research interests include carbon foams, carbon nanoconstituents, composite materials, and design fabrication of thermal property devices for micro- and nanometric measurements.

Dr. C. William Lee, Professor; Ph.D., The Ohio State University (1982). Research has been in the area of modeling, control and automation of polymer processing.

Dr. Kevin Myers, Professor, D.Sc., Washington University (1986).
Research interests include mixing, chemical reaction engineering, and process modeling.

Dr. Tim Resch, Part-Time Instructor, Ph.D. Massachusetts Institute of Technology, (1995).

Dr. Tony Saliba, Professor, Dean – School of Engineering, Ph.D., The University of Dayton (1986). Research involves the development and use of process models, expert systems and expert models for the intelligent processing of advanced composite materials

Dr. Sarwan Sandhu, Professor, Ph.D., The Imperial College, London (1973).
Research activities involves the application of thermodynamics, kinetics and reaction engineering in addition to fluidization, electrochemistry and electrochemical engineering, batteries/fuel cells, optics, and material science engineering.

Dr. Robert Wilkens, Director – Chemical Engineering, Associate Professor, Ph.D., Ohio University, (1997). Research interests are in the area of multiphase flow, thermal management, and fluid mechanics.
