

EU Data Privacy Law – LAW 6221

2 credits

This course will provide the students with a thorough understanding of European data privacy law, focusing on the regulations on personally identifiable information as they relate to international data transfer. This course will cover history and framework of European data regulation, European and national data protection laws and enforcement, legal concepts concerning privacy and trans-border data flow. Student will engage in an in-depth discussion of various European Court of Human Rights and Court of Justice of the European Union cases and Article 29 Working Party advisory papers involving privacy matters. Students will also engage in the practical and responsible application of information management best practices to allow them to problem solve the privacy challenges clients face today. Upper-Level. Prerequisite: Privacy Law. Credit Type A.
