

PRACTICAL WISDOM

All undergraduates will develop and demonstrate practical wisdom in addressing real human problems and deep human needs, drawing upon advanced knowledge, values, and skills in their chosen profession or major course of study. Starting with a conception of human flourishing, students will be able to define and diagnose symptoms, relationships, and problems clearly and intelligently, construct and evaluate possible solutions, thoughtfully select and implement solutions, and critically reflect on the process in light of actual consequences.

CRITERIA	Unacceptable(0)	Developing (1)	Competent (2)	Exemplary (3)
Student demonstrates the skills, knowledge, and values required to find solutions to real human problems and deep human needs.	Student did not demonstrate the skills and knowledge required to identify and solve real-world problems.	Student demonstrates limited skills and knowledge required to identify and solve real human problems.	Student identifies and demonstrates multiple approaches required to solve some real human problems.	Student demonstrates the various skills and knowledge required to solve real human problems in different contexts.
Student can define and diagnose the symptoms that signify real human problems and deep human needs	Student did not define and diagnose the symptoms that signify real human problems.	Student can define and diagnose some of the symptoms that signify real human problems.	Student can differentiate symptoms that signify real human problems that occur in a few different contexts.	Student can identify the symptoms that signify the most important human problems that occur in a variety of different contexts.
Student can construct and evaluate solutions to real human problems and deep human needs and reflect critically on the process in light of actual consequences.	Student did not construct a solution that addresses a human problem and ignored relevant contextual factors.	Student constructs a solution that addresses a real human problem but ignores relevant contextual factors.	Student can construct and evaluate adequate solutions to a variety of real human problems.	Student can construct and evaluate solutions that are characterized by deep and thorough consideration of the history of problem, its logical requirements, the feasibility of a solution, and the impact of a solution on deep human needs.
