

Item Assessment

Provides answer choice frequency information on a question-by-question basis, which for test grading is useful for question validity. Using the Item Analysis report, you can see how students responded to the question. On a per questions basis, this report displays each answer choice, its frequency and corresponding percent, and a bar chart of the frequency. Answers chosen more often than the correct answer are shown in red and the correct answer is shown in green. This report is a shorter version of the Detailed Item Analysis.
