

SAFE COMPUTING

SO SIMPLE, IT'S SCARY

Oops! You clicked on a simulated phishing test.
Remember these tips for strengthening your phish detection skills:

Stop. Think. Ask:

- Is the email expected?
- Do I know the sender?
- Are the addresses legit?
- On hover, where do links point?

Be extra wary of links, requests to login/update info and anything urgent. Instead, go to the website separately.

Not sure?

- Contact the sender separately.
- When in doubt, delete suspicious emails.

For more information, contact the IT Service Center, itsc@udayton.edu, or visit go.udayton.edu/safecomputing.
