

Symantec Endpoint Protection (SEP11) Installation

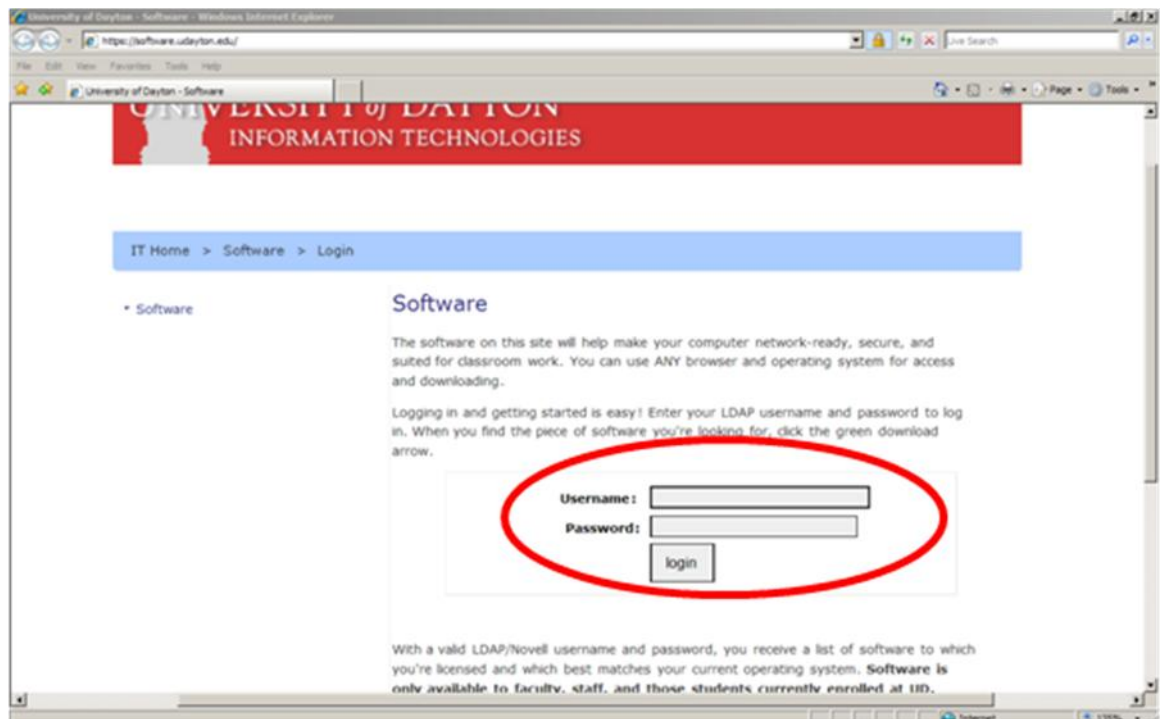

created by: J.T. Imming

Background

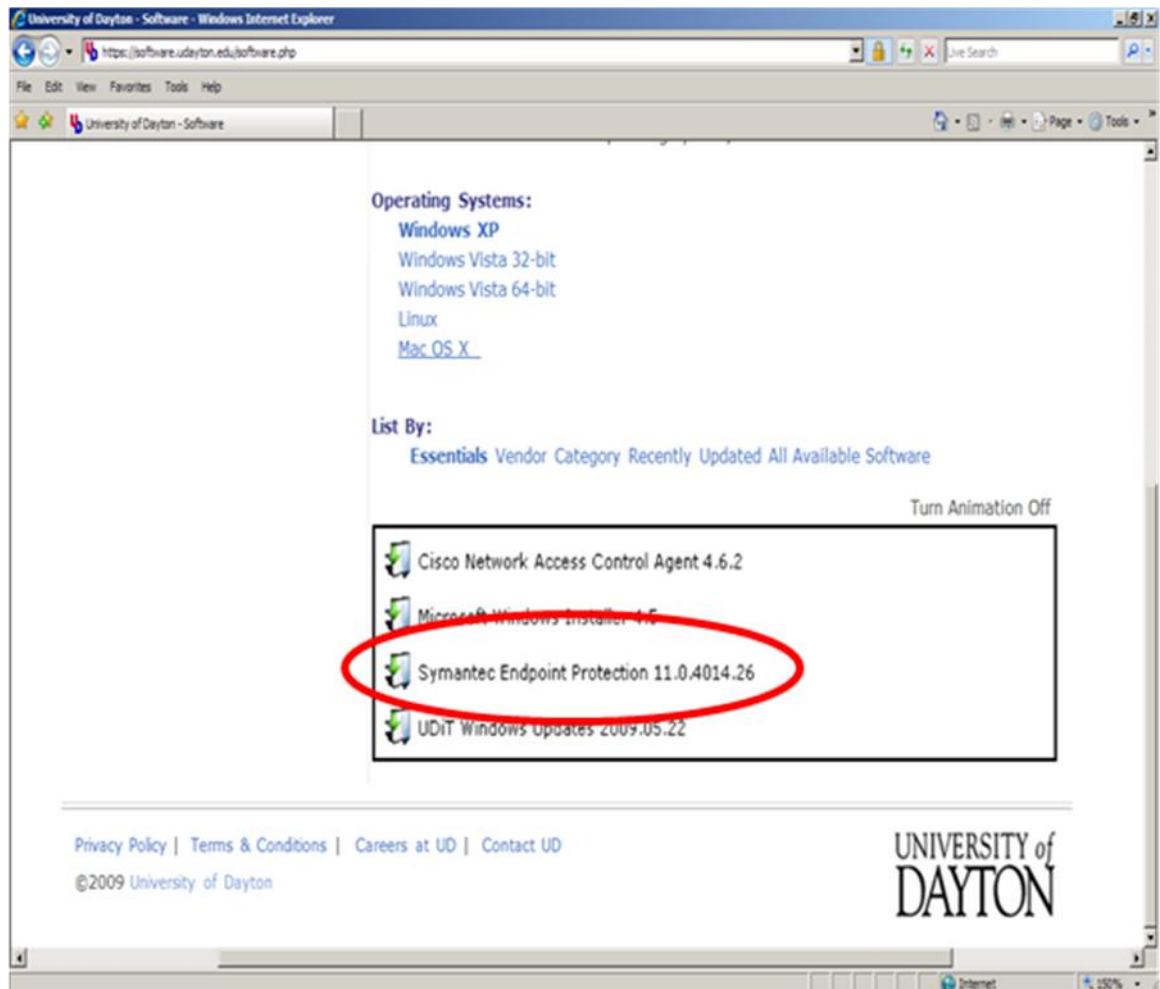

Symantec Endpoint Protection (SEP11) is UD's new required security software. SEP11 includes anti-virus, anti-spyware, and firewall protection components. Other security software on your computer must be removed before installing SEP11. You may be prompted to remove other anti-virus, anti-spyware, or firewall programs during the installation process.

Step-by-step process of installing SEP11

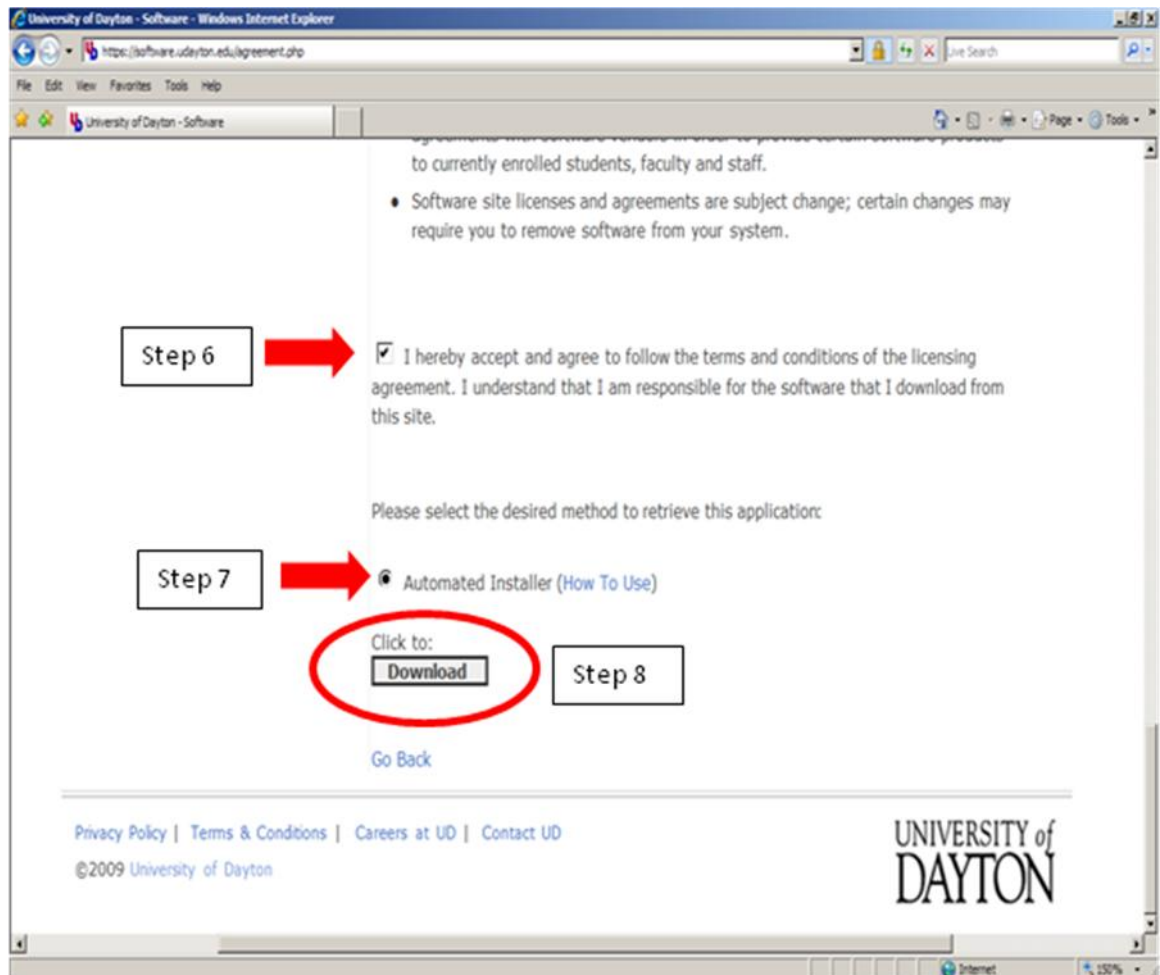

1. Open your web browser.
2. Go to the website: <http://software.udayton.edu>
3. Login in using your LDAP/Novell Username and Password.

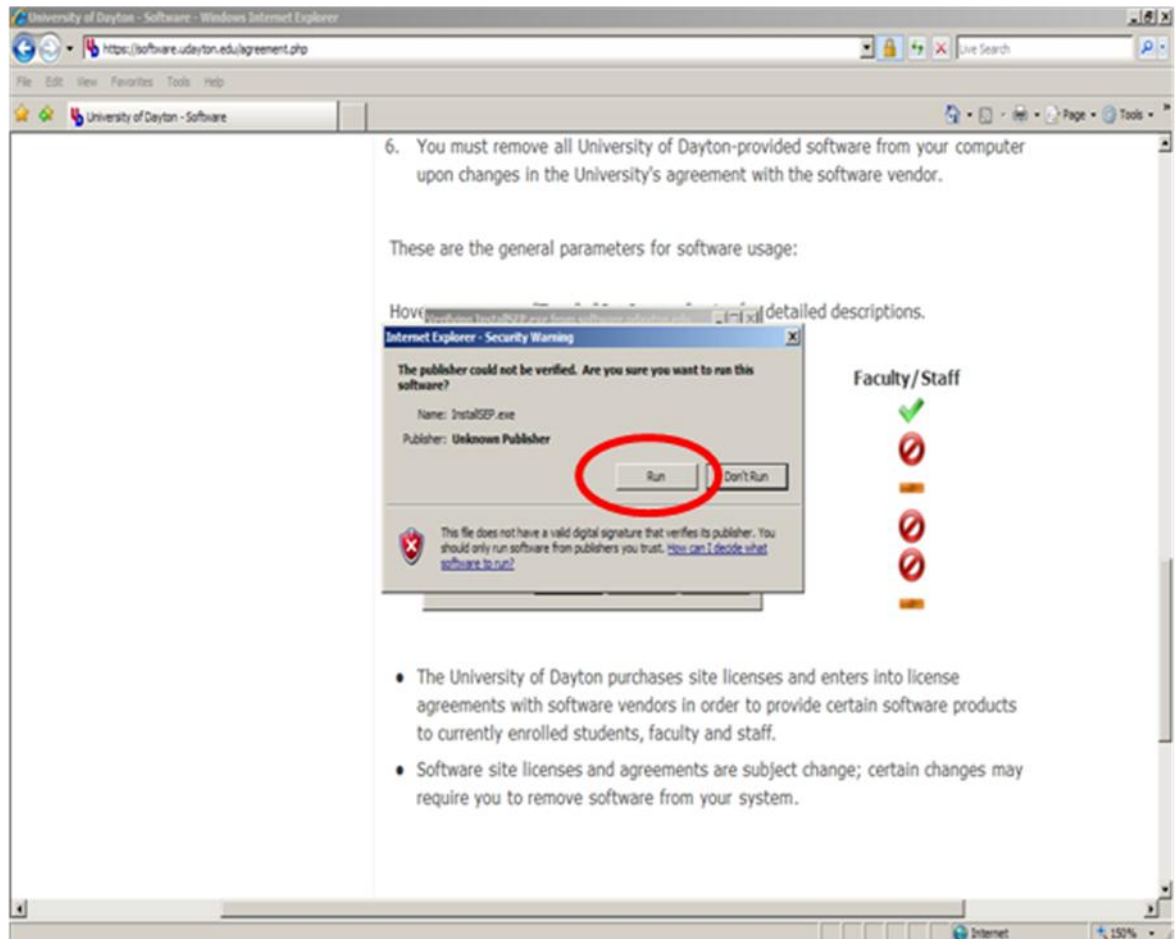

4. Select your operating system.
5. Select Symantec EndPoint Protection (includes current version number).

6. Read and accept Terms and Conditions.
7. Verify Automated Installer is selected.
8. Click Download.

9. Save SEP11 installer to Desktop.
10. Run SEP11 installer.
11. If prompted by a Security Warning, click Run.

12. Respond to messages until installation is complete.
13. Uninstall existing anti-virus, anti-spyware, or firewall applications as required by SEP11 messages.
14. Restart your computer and then run the installer called "installSEP.exe" from your desktop.

TIP-Questions or problems call the IT Help Desk at 937-229-3888.
