### What is Warpwire Video?

Warpwire Video is a video hosting and streaming platform for educational use that UD has integrated into Isidore. It can be added like any other Isidore tool. Both students and faculty are able to store their course-related videos in Warpwire Video. It allows students and faculty to easily upload & embed their videos into different Isidore tools, such as Announcements, Assignments, Forums, and Lessons. Warpwire Video allows you to upload existing videos from your computer, smart phone, or other mobile device or record videos on the fly within the application through your web cam or mobile device.

### Why Use Warpwire Video?

The advantage Warpwire Video provides over other video services such as YouTube is that instructors and students can control exactly who has access to the videos. For example, video access can be limited to a particular course roster. Additionally, the videos are easily managed and controlled from within Isidore, alongside your other online content.

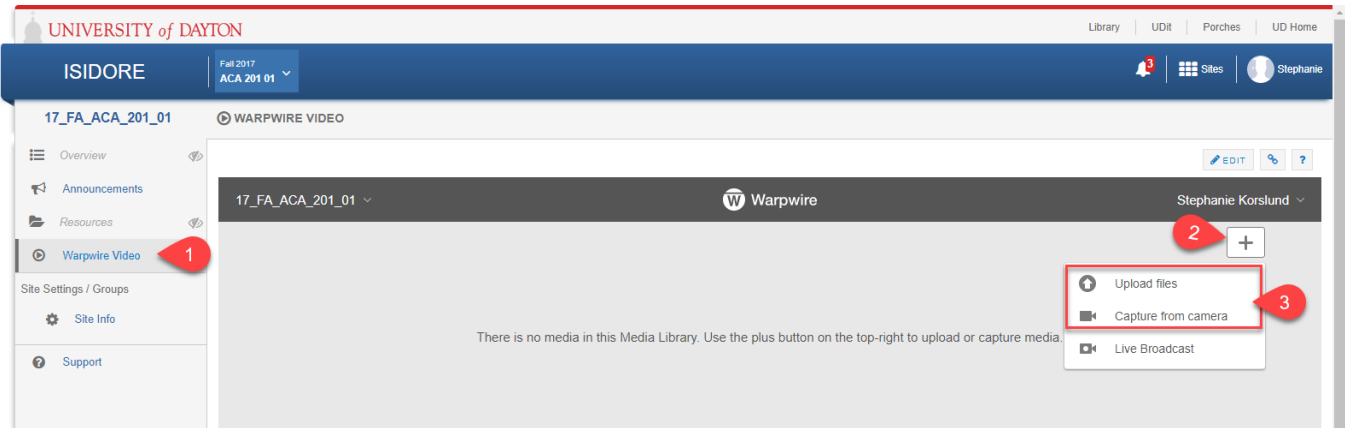

## How to Add Videos to a Course Site Using Warpwire

Videos can be added to a course site a few different ways with Warpwire. Below are directions for the different ways to add videos with Warpwire.

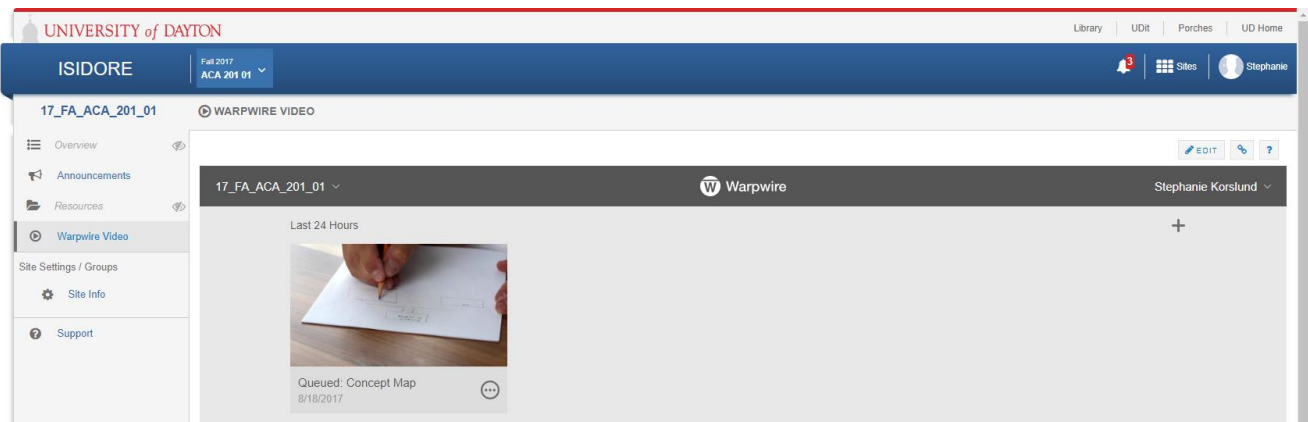

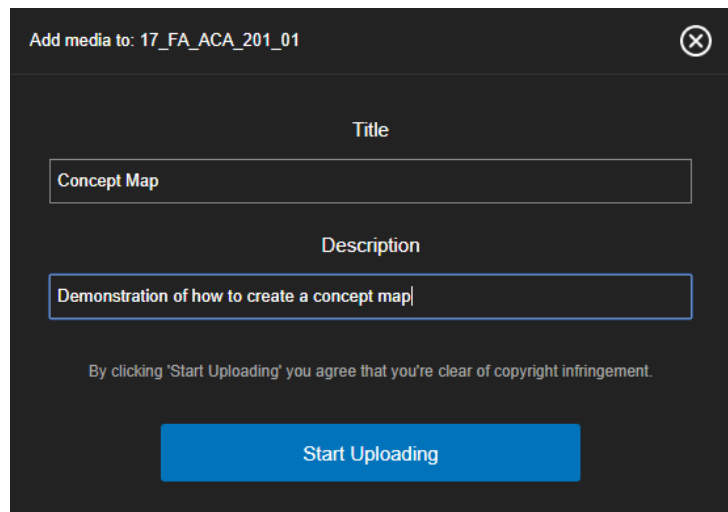

### How to add video using the Warpwire Video tool

To add a video directly to the Warpwire video tool:

1. Click on the **Warpwire Video** tool from the tool menu. If you do not see the tool in your tool menu you will need to add it to your course. Instructions for adding Warpwire Video to your course can be found at [https://ewiki.udayton.edu/isidore/Add the Warpwire Video tool](https://ewiki.udayton.edu/isidore/Add%20the%20Warpwire%20Video%20tool)
2. Click on the **+** button.
3. From the drop down menu, select whether you want to **Upload files** from your computer or **Capture from Camera**. For specific instructions on uploading files or recording from your camera see [https://ewiki.udayton.edu/isidore/Warpwire\\_Video](https://ewiki.udayton.edu/isidore/Warpwire_Video)

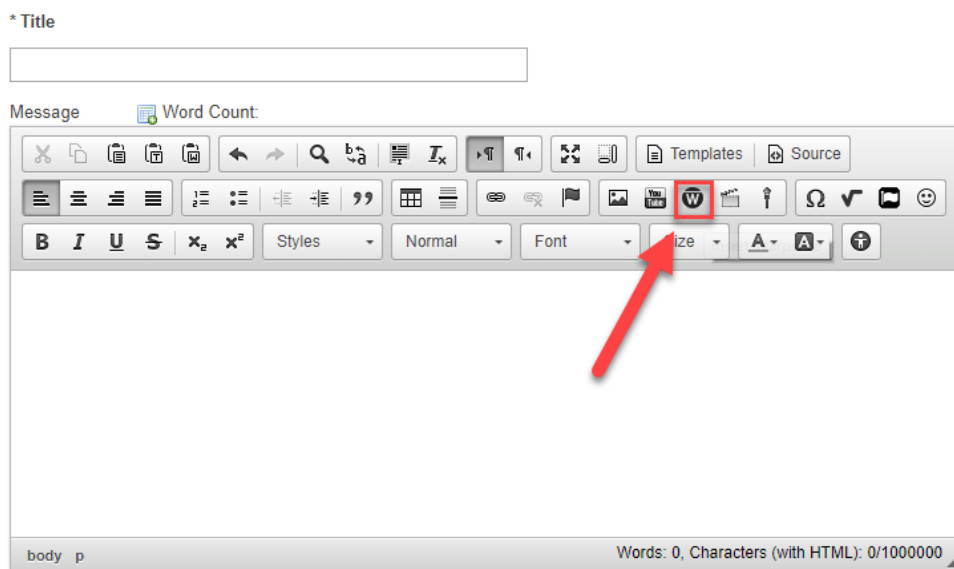

4. Once you have the video in Warpwire you can change the title of the video and add a description so your audience understands what the video is about. Click on the **Start Uploading** button.
5. You'll see a green progress bar at the bottom of your screen while the video is uploading.
6. Your video will be queued while it is uploading. It will appear in grey while it is in the queue.
7. Once the video has finished uploading, your video will appear in the course's media library and will be accessible to all users in your course.

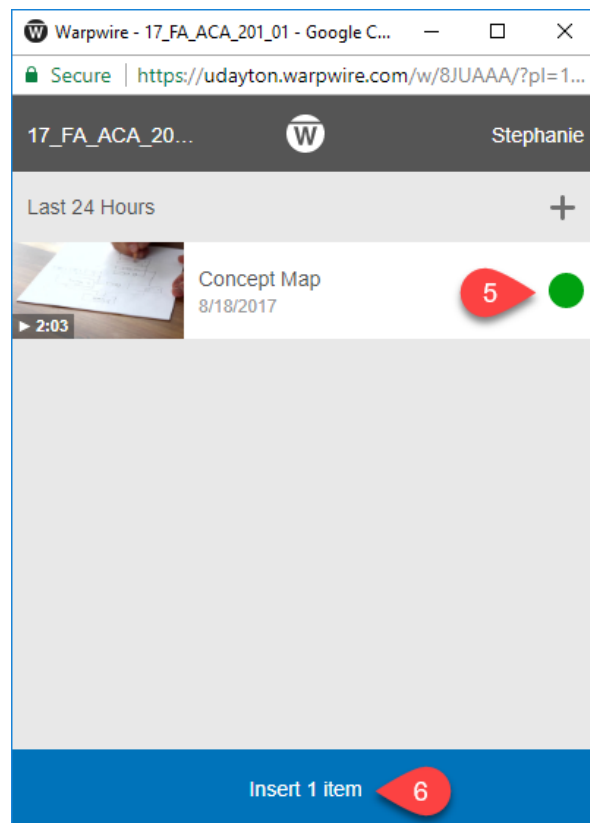

## How to add video using the Warpwire Video Button in the Rich-Text Editor

Some tools, such as Assignments, Forums, Announcements, and Lessons, will allow you to embed a video directly within the tool using the rich-text editor. To embed (or insert) a video into one of these tools:

1. Go into the tool you're wanting to add a video to and get to the spot where you're wanting to insert your video. *For example, in the Forums tool, you may want to click on a topic and then select **Start a New Conversation**.*
2. When the rich-text editor loads, look for an icon that is a black circle with a white "W". It will say **Insert Warpwire** when you hover your cursor over it. Click on the **Warpwire** icon.

3. Note: If you have not gone into the Warpwire tool in the course you want to add a video to before trying to add in the rich-text editor, you will get a message saying you need to visit the Warpwire Video tool before being able to add videos in a rich-text editor.
4. You can either select an existing video from your library, by clicking on the empty circle to the right of the video, or you can follow the instructions to Upload a video from your computer. Once you select a video, the circle will be filled in with solid green coloring.
5. Once the video is selected, click on the "Insert 1 item" button near the bottom of the screen.
6. You'll see a thumbnail version of the video has been inserted into the text editor.
7. When you're finished writing your discussion post, assignment, or announcement, go ahead and post or submit it.

## Sharing Videos with Your Audience

There are several ways to share your videos with others in Warpwire. Below you will see instructions for sharing your video with different audiences.

### How to Share Videos with a Roster

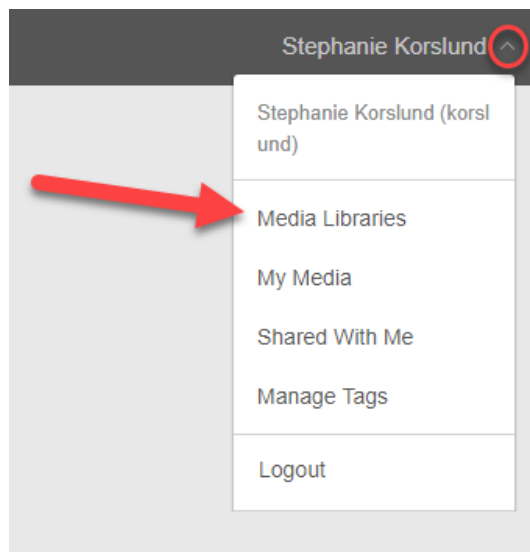

The Warpwire Video tool by default shares any video added to it with your course roster. The only thing you need to do to share videos in this manner is to make sure the Warpwire Video tool is added to your course site. Instructions for adding Warpwire Video to your course can be found at [https://ewiki.udayton.edu/isidore/Add the Warpwire Video tool](https://ewiki.udayton.edu/isidore/Add_the_Warpwire_Video_tool)

### How to Limit Sharing to One or More Students

Sometimes you may want the video to be shared with a single student or just a few students, but you don't want it shared with the entire roster. To accomplish this you will need to add the videos to a separate Library because the permissions on the default library for your course make the videos available to everyone in your roster.

To create a new library:

1. Click on the **Warpwire Video** tool from the tool menu.
2. In the Warpwire Video tool click on the down arrow next to your name and select **Media Libraries** from the drop down menu.

3. You will be brought to a page with all your course libraries. Click the + to add a new library.
4. A pop up to create your new library will appear. Give your new library a name and click **Create**.

A screenshot of the "Create New Media Library" pop-up form. The form has a dark background and a blue "Create" button at the bottom. At the top, the text "Create New Media Library" is displayed in white, with a close button (an 'X' in a circle) to its right. Below the title, the word "Title" is centered, and there is a large, empty text input field with a blue border. The "Create" button is a solid blue rectangle with the word "Create" in white text.

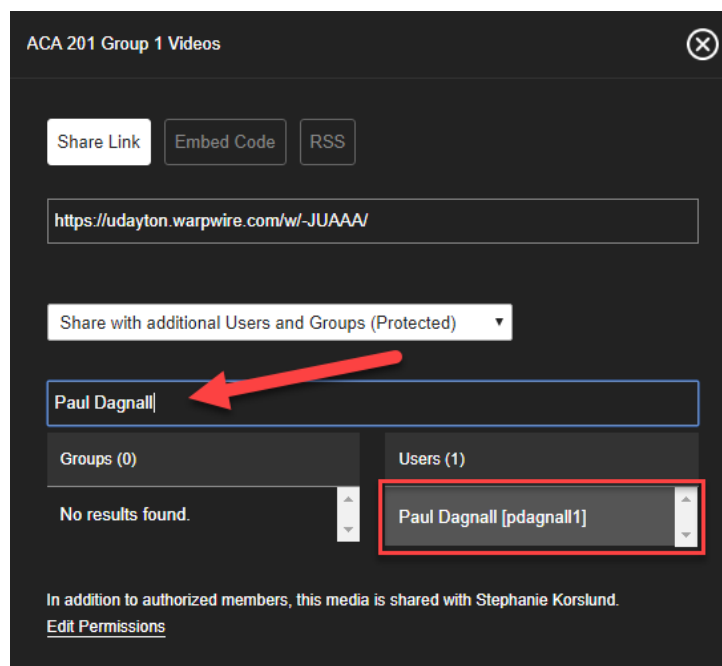

5. The new library will now appear in your list of libraries.

To share a new library with a user or group:

1. In the Warpwire Video tool click on the down arrow next to your name and select **Media Libraries** from the drop down menu.
2. You will be brought to a page with all your course libraries. To manage who can see a new library click the circle with the three dots on the opposite side of the library title and then select **Share** from the drop down menu.

3. In the box at the bottom of the pop up you can type the names of users or groups who you would like to share the library with. After you have typed the user or group's name into search box, you should see a list of users and/or groups appear. Click on the user or group that you want to share the library with. Repeat this step for each user or group who needs access to the library.

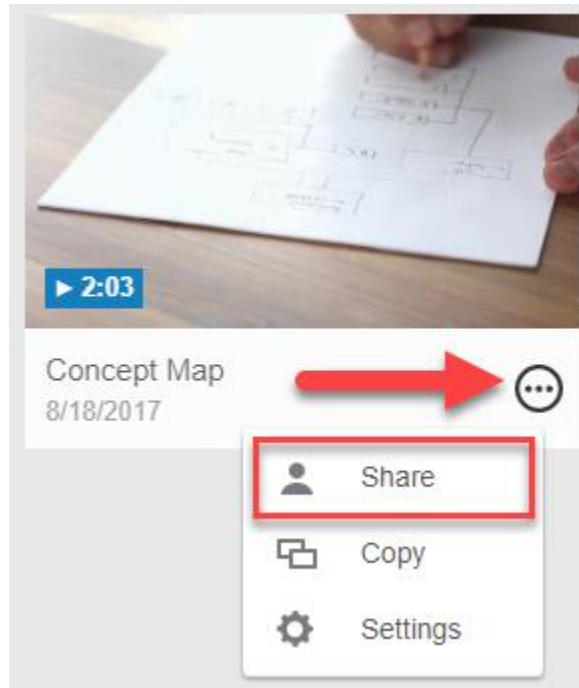

4. Students will then be able to access the separate library by clicking on the down arrow next to their name when they are in the Warpwire Video tool and selecting My Media Libraries. The separate library will show up in their library list.

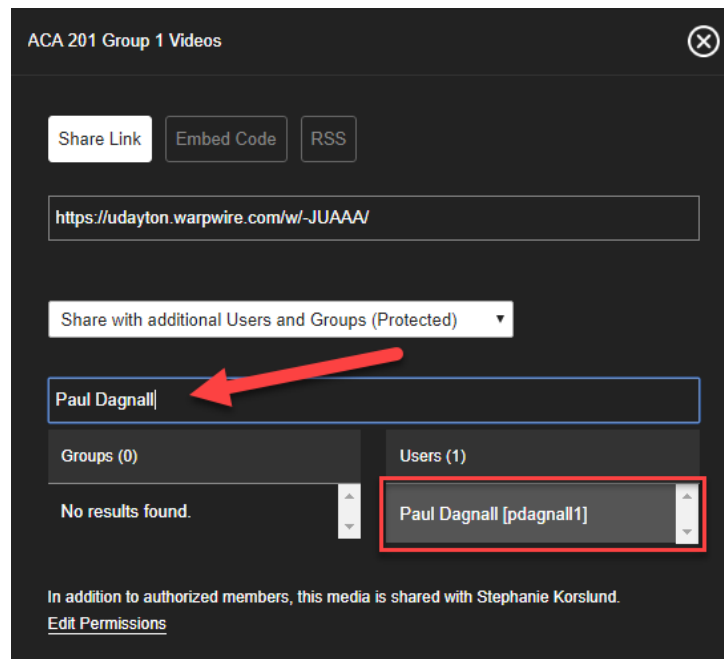

To share individual videos with specific students:

1. In the Warpwire Video tool click on the down arrow next to your name and select **Media Libraries** from the drop down menu.
2. You will be brought to a page with all your course libraries. Click on the new library you want to add videos for individual users or groups.
3. Add the video or videos you want to share to the new library.

4. Once the video(s) are in your new library, click on the circle with the three dots on the opposite side of the title of the video you want to share. From the drop down menu select **Share**.

5. In the box at the bottom of the pop up you can type the names of users or groups who you would like to share the library with. After you have typed the user or group's name into search box, you should see a list of users and/or groups appear. Click on the user or group that you want to share the library with. Repeat this step for each user or group who needs access to the library.

6. Students will then be able to access the videos by clicking on the down arrow next to their name when they are in the Warpwire Video tool and selecting Shared with Me. The video(s) you shared separately with them will appear on a new page.
